                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The tga codon is read as Tryptophan in Mycoplasma capricolum Coding sequences below were putatively identified by Peer Bork using the program Genequiz at the EMBL.

EMBL. Meyerhofstr.1, 69012 Heidelberg, Germany
E-mail borkembl.heidelberg de
More than 870,477 bases have been sequenced by the genomic walking technique and assembled into 372 non-overlapping contigs (Accession numbers 233005 to 233376) covering 214,528 base pairs. The length of the contigs varies from 63 base pairs to 2049 base pairs with an average length of 58 base pairs. The dength of the contigs varies from 63 base pairs. The length of the contigs varies from 63 base pairs at 2049 base pairs with an average length of 58 base pairs. The length of the contigs varies from 63 base pairs at 2049 bases (4%) from one pass fluorescent sequencing and 201,437 bases (4%) from the pass fluorescent sequencing and 120,637 bases (5%) are covered on both strands. There is a total of 968 ambiguous nucleotide assignments in the data set (6%) are compared 8,686 bases of our data with Mycoplasma capricolum sequences already stored in the public databases and note less than 0.7% difference between the two data sets (100,000 pairs) insertions, deletions and mismatches ).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      [bases 1 to 363]

* are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

on Nov 16, 2001 this sequence version replaced gi.15131273.

During sequence assembly date is comperated from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL: Sw:, SMISSROT; T:: TRRMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human was generated from part of bacterial clone contigs of human professor. It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2147 2246: gap of 100 bp 2247 2246: gap of 100 bp 2247 2246: gap of 100 bp 5242 5941: contig of 3595 bp in length 5247 5941: gap of 100 bp 6401 8501 15153: contig of 6653 bp in length 8501 15153: contig of 6653 bp in length 15154 15253: gap of 100 bp 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 15154 1515

Direct Submission

Submitted (15-FEB-2000) Sanger Centre, Hinxton, Cambridgeshire, Submitted (15-FEB-2000)

COBO 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Feb 7, 2000 this sequence version replaced gi:678223.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the together within not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                               Human DNA sequence from clone RP1-39M18 on chromosome 6q26-27.

Contains part of the PDE10A gene for phosphodiesterase 10A, ESTS, SISS and GSSs, complete sequence.

Em:, EMBL; Sw.; SWISSPOT: Tr:, TREMBL; Wp:, WORMPEP. Information on the WORMPEP database can be found at their source action of the WORMPEP. Information on the WORMPEP database can be found at chromosome from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at the Norwasian is from the library RPCI-1 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further works.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IMPORANT: This sequence is not the entire insert of clone RP1-38MH8 It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone RP1-38MH8 is at 1 in this sequence. The true left end of clone RP1-38MH8 is at 69575 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FEATURES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tnc.edu/docs/denbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 50 configs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the configs are represented as tuns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                 Direct Submission

It currently * consists of 25 contigs. The true order of the places * is not known and their order in this sequence record is * arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the apps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18287: gap of 100 bp 12237: contig of 4040 bp in length 130709: contig of 8282 bp in length 130809: gap of 100 bp 100 bp 13287: contig of 8282 bp in length 132827: contig of 2018 bp in length 13527: gap of 100 bp 135248: contig of 3321 bp in length 135348: gap of 100 bp 135348: gap of 100 bp 100 bp 135348: gap of 100 bp 10
                                                                                                                          Genter project information
Center project information
Center project name: bAPBL16
Assembly program: XGAP4; version 4.5
Sequencing vector: plasmid; LOB75; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Consensus quality: 13724 bases at least Q40
Consensus quality: 139166 bases at least Q30
Consensus quality: 142544 bases at least Q30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4895 4994; gap of 100 bp 100 bp 16378; contig of 11384 bp in length 16379 16478; gap of 100 bp 18490; contig of 2012 bp in length

NOTE: This is a 'working draft' sequence. It currently consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Insert size: 220000; agarose-fp
